Autopacker Benefits

1. High Performance

Our Autopacker can fill 125 - 250 cans per minute ensuring fast streamlined packing. Its tireless motor can run day and night optimising productivity in minimum operation time.

2. No Gut

The viscera are removed from each fish individually through an orifice plate by vacuum. If required a second evisceration point can be fitted.

3. Durable

Autopackers installed 25 years ago are still running strong today. The simple and tough design ensures that it can run long hours, maintaining fast precision packing year after year. It has compellingly established its reputation as a reliable workhorse and is the industry standard in South Africa and Namibia.

4. Low maintenance

The Autopacker's rugged stable design has proven time and again that it can efficiently perform on a long term basis. The trained operators need only use the easy-to-follow steps to keep these high performance machines running.

5. Adaptability

The Autopacker is designed to the client's specifications. Modifications can be made to accommodate various pelagic fish species, various can formats and various process requirements.

6. Compact design

Due to the Autopacker's compact design, it can easily fit into an existing plant, making all the more economic sense.

7. After-sales service

Since Easy Can takes unique pride in its craftsmanship and values the seal of approval from its clients, after-sales service plays an important role in our business. We encourage feedback and remain available for any back-up assistance and training.
